

Strawberry Growing System Instructions (2 pages)

1. Place your strawberry tube in a small container similar to the one shown below.

2. Fill the tube with Tom's organic soil mix to the first set of holes like this.....

3. Take a tablespoon of Tom's organic fertilizer and add to your strawberry growing tube soil mixture....

4. Place your fingers inside of the tube and press down to level your soil mix.....

5. Place your strawberry plant(s) into the hole with the roots pushed inside of the growing tube; if the roots are too long, then prune them back to 4 or 5 inches.....

6. Repeat steps 2 - 5 until all of the holes are planted.

7. Take your garden hose and attach it to the watering system. **BARELY** turn on your water; maybe 1/8th of a turn; watering should be complete in 2-4 minutes.

8. Using a water wand (not included) and water the outside of the plants in the growing tube.

9. For the first 7 - 10 days water the outside of the growing tube to keep the outside plants moist.

10. After 7-10 days attach your garden hose to the watering system as needed. This should be done at least every 2-3 days depending on your weather.
